Fields of application

SD&C differentiates three fields of ageing simulation, which require different levels of sophistication: 1. public sensitization, 2. education and training, and 3. product design.

To sensitize the public for the current demographic change towards more senior citizens and for the accompanying problems of reduced seeing, hearing and movability, SD&C recommends model Alpha, a simulation suit that makes the problems clear to everybody instantaneously, nevertheless not traumatizing anyone.

For education and training of students of medicine, and also for personnel in touch with the elderly, the visual sense and the movement restrictions need to be simulated more exactly. Here we recommend age simulation Suit Beta with an ageing simulation optics covering all relevant visual factors over two steps of age and with specialized variable elbow and knee bandages. Additional components can artificially induce Parkinson Tremor and Tinnitus sounds.

Product design and engineering require the highest sophistication of ageing simulation, as here false decisions can easily cost much. Age Suits for consulting and the industry must allow younger designers and engineers a realistic evaluation of the visual areas, of reach, grip and force of the elderly intended to use a product. This field is where SD&C’s Senior Suit Delta is setting the international standard, a suit protected by patent law. There is no other tool available to quickly explore the needs of elderly as the SD&C Senior Suit Delta.
EU-wide Rental

Senior Suits

SD&C will rent a Senior Suit to any organization within the EU wanting to sensitize the public for the demographic change and the needs of the elderly. The effects, which one can experience through aging simulation, intuitively and far better explain the functional limitations of the elderly than any theoretical introduction.

The Senior Suit comes in a trolley case, and instructions of use will be included. Minimal rental time is 2 days. It is advisable to use the day before an event to get experienced in the use of the simulation suit. It is possible to rent several age suits for one event. Weekends and holidays remain free of charge.

After specifying an age suit type and requesting to rent for a certain date, an offer will be sent from SD&C. After sending back the signed offer, a simulation suit will be sent to arrive in time. And on the first working day after rental time the Senior Suit will be picked up again.

And what is best: Should renting inspire you so that you want your own Senior Suit, the rental price can be fully deduced from the sales price.

Drunkenness Simulation Goggles

For the additional sensitization for the dangers of alcohol when driving, drunkenness simulation goggles can be rented.

Drug Consume Simulation Goggles

For the additional sensitization for the dangers of drug consume when driving, drug simulation goggles can be rented.

* Price per day plus 90 € for EU-wide delivery and pickup
Introduction to Theoretical and Practical Ageing Simulation

A modern age simulation suit is as complex as a diving suit, and the process of simulation has different effects regarding bodily strength, the senses, and movability. The success of presenting, demonstrating or applying an age suit thus depends much on the knowledge of the presenting person. For organizations without any medical, human biology or ergonomic expertise, training sessions are offered. SD&C training sessions include:

- Training on how to work with the individual parts of the simulation suit, correctly putting it on and removing it
- Information on the normal ageing process and the changes that occur to the body that affect its performance
- Information on the method, effectiveness and limits of the simulation
- Information on how to set up an obstacle parcours
- Information on and how to psychologically care for the person wearing the simulation suit
- Information about physical and psychological dangers and how to avoid them
- Information on hygiene and caring for the suit

The training session can be held at the SD&C offices or at the customer’s site. Training can also be combined with the first day of scheduled use.

Prices:

**Introduction to Age Simulation (1/2 day)**

€ 400 /day plus travel costs
Accompanied Senior Suits®

SD&C is pioneer of age simulation in the public and has organized age suit demonstrations for various locations in Europe and worldwide.

SD&C provides age simulation suits for special events and can arrange for a technical support person. The suits give those interested the opportunity to briefly experience what it is like to be old. The SD&C technical support person can explain the bodily changes that occur during the ageing process and how the suit simulates them. The psychological changes that take place as people age are also addressed.

For outdoor events and travel from Munich, SD&C can bring along a pavilion tent with all the equipment and components for an obstacle course. For indoor events, the age simulation presentation can be adapted to the conditions on site and an obstacle course can be set up after consulting with the customer.

An automated power point presentation on the ageing process can be used to support the age simulation suit presentation.

Model Senior Suit® Beta will be used.

Prices:

For each age simulation suit with one support person per day
€ 800 plus travel costs

More than one suit can be used at a time.

Travel costs by car are charged 30 cent per km.
Ergonomics Workshop with Dipl.-Psych. Dr. Roland Schoeffel

The workshop can be used to check products, systems or installations with respect to their ergonomic suitability for the elderly or to generate ideas for new or improved products. Using an SD&C checklist based on ISO 20282 with more than hundred points, it is possible to reach a level to qualify for certification. A larger audience can be addressed, when the workshop begins with a lecture and the age simulation is presented on a stage allowing the audience to follow the experience. To allow all participants the experience of instant ageing, 15 min for the experience and 5 min for changing the simulation suit should be calculated. The lecture content and the age simulation parcours can be geared towards special design topics. Dr. Schoeffel is a well-known ergonomics expert and has had a considerable impact on how products are designed to be suitable for the elderly. He has been leading the ergonomics of Siemens Design and was German delegate for international ergonomics standardization. His competent and humorous presentations routinely score very high ratings. The presentation can be scheduled in German or English. Other languages upon request. The workshop includes the use of two SD&C Senior Suit Delta.

Prices:
Per workshop day
€ 2,950 plus travel costs

For each additional simulation suit with SD&C support person
€ 800 /day plus travel costs

For each additional simulation suit without SD&C support person
€ 500 /day
Usability Workshop with Prof. Dr. Dr. Elena Averboukh

The workshop can be used to check products, systems and installation with respect to their usability and innovation, including the elderly. The workshop can especially contribute to a company’s quality standards introducing the use of statistical six sigma techniques. A larger audience can be addressed, when the workshop begins with a lecture and the age simulation is presented on a stage allowing the audience to follow the experience. To allow all participants the experience of instant ageing, 15 min for the experience and 5 min for changing the simulation suit should be calculated. The lecture content and the age simulation parcours can be geared towards special quality and innovation topics. The presentation can be scheduled in German, English, or Russian. Other languages upon request. Prof. Dr. Averboukh is a well-known capacity in both the scientific and business world, having worked on quality, operational excellence and UX projects with industrial companies in Europe, Asia, and the USA. She is a certified Six Sigma Master Black Belt bei ASQ, Motorola University, Siemens Learning Campus, Shell Learning etc., and has been a lecturer for several universities worldwide. The workshop includes the use of two SD&C Senior Suit Delta.

Potential example:
10:00 Start of the event
10:30 Presentation
11:30 Discussion on the topics addressed
12:00 Lunch break
13:00 Participants take turns to experience the ageing process in the suit and on the parcours.
16:00 Closing discussion on the participants’ experiences, details and ideas
17:00 Open end

Prices:
Per workshop day
€ 2,950 plus travel costs

For each additional simulation suit with SD&C person
€ 900 /day plus travel costs
**Sale: SD&C Senior Suit ® Alpha 2**

**Description**

The SD&C Senior Suit ® was developed to sensitize the public for the problems of ageing. The age suit simulates the following effects:

- High frequency hearing impairment
- Vision deterioration
- Change of color vision
- Limit of peripheral vision
- Limitation of head movement
- Reduction of muscular body strength
- Stiffness in the back
- Shortness of breath
- Shoulder stiffness
- Loss of strength in the arms
- Loss in elbow movability
- Deterioration in sensitivity of the fingertips
- Contracture of the wrist joints
- Stiffening in the knee joints
- Loss of strength in leg muscles

The simulation results in combined effects such as impaired coordination, less balance, less overall control, deteriorated grip and handling of objects, uncertainty and communication problems so that so that everyday tasks like counting money or operating a vending machine directly reveal the typical problems of getting older.

Several hundred companies, universities, hospitals and retirement homes, assisted-living centers, government facilities and schools all over Europe have used the age simulation suits from SD&C to educate people on the problems of the elderly.

**Delivery Content**

1. Special simulation vest with 4 frontal and 5 dorsal pockets for fast change of simulation weights, integrated stiffening elements for shoulders and back, strip elements at both sides to optionally deteriorate breathing, easy to put on by frontal zipper, wide entry for big persons, military quality, machine washable
2. Set of frontal and dorsal simulation weights
3. Set of ear muffs to simulate high frequency hearing impairment
4. Pair of goggles with simulation film to simulate 3 ageing effects
5. Neck brace to simulate difficulty in moving one's head
6. Set of white gloves to reduce tactile sensitivity
7. Jumpsuit to protect clothing and improve hygiene
8. Wrist weights to simulate reduced arm strength
9. Ankle weights to simulate reduced leg strength
10. Special elbow bandages with stiffing elements to restrict arm movement, variable for different degrees of ageing
11. Special knee bandages with stiffing elements to restrict leg movement, variable for different degrees of ageing
12. Wrist protectors as wrist contracture
13. Instructions of use
14. Guarantee
15. Trolley carrying case with combination lock

The overall is available in either blue, red or black color.
Sale: SD&C Senior Suit ® Beta 2

Description

The SD&C Senior Suit ® Beta is especially intended for education and training. The age suit simulates the following effects:

- High frequency hearing impairment
- Special optics simulating 5 aging factors
- Loss of visual acuity over 20 and 40 years of age
- Change of color vision
- Limited peripheral vision
- Slight macular degeneration
- Greater visual need for light
- Limitation of head movement
- Reduction of muscular body strength
- Stiffness in the back
- Shortness of breath
- Shoulder stiffness
- Loss of strength in the arms
- Reduced elbow movability
- Deterioration in sensitivity of the fingertips
- Contracture of wrist joints
- Reduced knee joints movability
- Loss of strength in leg muscles

The simulation results in combined effects such as impaired coordination, less balance, less overall control, deteriorated grip and handling of objects, uncertainty and communication problems, so that so that everyday tasks like counting money or operating a vending machine directly reveal the typical problems of getting older.

Delivery Content

1 Special simulation vest with 4 frontal and 5 dorsal pockets for fast change of simulation weights, integrated stiffening elements for shoulders and back, strip elements at both sides to optionally deteriorate breathing, easy to put on by frontal zipper, wide entry for big persons, military quality, machine washable
1 set of frontal and dorsal simulation weights
1 set of ear muffs to simulate high frequency hearing impairment including an electronic tinnitus sound with adjustable loudness
1 special age simulation optics for 5 effects with fold-up visor to simulate either 20 or 40 years of ageing, limited peripheral vision, deterioration of color vision, greater need for light, and a light macular degeneration (when visor is down)
1 transportation bag for simulation optics and ear muffs
1 neck brace to simulate difficulty in moving one’s head
1 set of white gloves to reduce tactile sensitivity
1 jumpsuit to protect clothing and improve hygiene
2 wrist weights to simulate reduced arm strength
2 ankle weights to simulate reduced leg strength
2 special elbow bandages with stiffing elements to restrict arm movement, variable for different degrees of ageing
2 special knee bandages with stiffing elements to restrict leg movement, variable for different degrees of ageing
2 wrist protectors as wrist contracture
1 instructions of use
1 guarantee

SD&C Senior Suit Beta: € 2.250
Delivery EU: € 45, worldwide: € 150
Sale: SD&C Senior Suit® Delta 2 ©

Description

The Senior Suit Delta is the top model from SD&C and sets the standards when compared to other age simulators around the world. The Senior Suit Delta is especially designed for use in industrial product and workplace design as well as for medical training. Through a great deal of experience and many applications, the Senior Suit Delta has evolved from a simulation set into an integrated simulation suit with many advantages:

- The simulated dimensions are selected with their ergonomic relevance and the ability to be simulated, and the components take into account functional ageing based on the most recent scientific findings (ISO 20282).
- The suit does not simulate diseases, rather the healthy process of ageing. This enables personal weaknesses to be located and the possibility to generalize the results from wearing the suit.
- A special two-level pair of simulation optics simulates the 5 most important effects of ageing on vision, with two levels, each over 20 years: reduced vision sharpness, reduced brightness, peripheral vision limits, color vision deterioration, and slight macular degeneration.
- The ear muffs electronically simulate tinnitus with white noise, whose loudness can be changed or switched off.
- The intensity of the elbow bandages can also be adjusted. The weight sleeves have removable cartridges and their three attachments ensure a firm hold.
- Its special adjustment procedure allows the suit to be worn by anyone of almost any size (150-200 cm). A special additional adjustment also allows big people to take part in the experience.
- The suit protects the test person and his/her clothing: It is robust and takes only 5 minutes to put on and take off.
- The suit as a special attachment system for accessories and measurement devices.
- Hygiene is also an issue taken care of. The simulation sleeves are not placed directly on the body. After use, they can be removed from the suit and the overalls part of the suit can be machine washed.

Content of delivery see next page
Sale: SD&C Senior Suit ® Delta 2 ©

Delivery Content

1 Suit special developed for age simulation and protected by patent law. Universally usable for body sizes between 150-200 cm of height with snap button adjustment system. Easy and fast to put on by a frontal zipper and double sided zippers on sleeves and legs, wide entry for big persons. Side lines of snap buttons allowing components and measurement equipment to be plugged against, thus exactly fixing their position. 4 integrated frontal and 5 dorsal pockets for fast change of simulation weights. Integrated stiffening elements for shoulders and back, strip elements at both sides to optionally deteriorate breathing, on shoulder openings for electric cables, air ventilation openings in the pit area. The suit is of military quality and machine washable.

1 set of frontal and dorsal simulation weights
1 set of ear muffs simulating hearing impairment of high frequencies including an electronic tinnitus sound with adjustable loudness
1 special age simulation optics for 5 ageing effects with fold-up visor to simulate either 20 or 40 years of ageing, limited peripheral vision, deterioration of color vision, greater need for light, and a light macular degeneration (when visor is down)
1 transportation bag for simulation optics and ear muffs
1 neck brace to simulate difficulty in moving one’s head
2 pairs of white gloves to reduce tactile sensitivity
1 pair of wrist weights bandages to simulate reduced arm strength with exchangeable and adjustable pockets with 10 small weight cartridges, trifold fixation by snap button system, Velcro and snap fasteners
1 pair of ankle weights bandages to simulate reduced leg strength with exchangeable and adjustable pockets with 12 small weight cartridges, trifold fixation by snap button system, Velcro and snap fasteners
1 pair of special age simulation elbow bandages with stiffing elements to restrict arm movement, variable for different degrees of ageing, snap button fixation system
1 pair of special age simulation knee bandages with stiffing elements to restrict leg movement, variable for different degrees of ageing, snap button fixation system
1 pair of wrist contractures
1 instructions of use
1 guarantee
1 trolley carrying case with combination lock
1 optional introduction to age simulation at SD&C location

SD&C Senior Suit ® Delta 2 ©: € 3.950  Delivery EU: € 45, worldwide: € 150
Upgrades

**Upgrade from Senior Suit ® Alpha 2 to Beta 2**

Five factor simulation glasses with two adjustment levels; 1 headset with 8 different tinnitus sounds, AA batteries included, 1 neck brace to simulate difficulty in moving one's head, 2 pairs of simulation gloves.

€ 900  Delivery EU: € 45, worldwide: € 150

**Upgrade from Senior Suit ® Beta 2 auf Senior Suit ® Delta 2 ©**

1 pair of adjustable overalls for body sizes between 150 and 200 cm with integrated attachments for simulation accessories and weight pockets for 9 weights; including associated weights, 1 pair of wrist weights bandages to simulate reduced arm strength with exchangeable and adjustable pockets with 10 small weight cartridges, trifold fixation by snap button system, Velcro and snap fasteners, 1 pair of ankle weights bandages to simulate reduced leg strength with exchangeable and adjustable pockets with 12 small weight cartridges, trifold fixation by snap button system, Velcro and snap fasteners, 2 pairs of simulation gloves; instructions for age suit 2011.

€ 1,800  Delivery EU: € 45, worldwide: € 150
Accessories I

This set of accessories simulates illnesses, impairments and other conditions that occur throughout the ageing process. The components are available as a supplement for the SD&C age simulation suit.

**Parkinson tremor simulation**

Using a special program, the device simulates the tremor experienced by people with Parkinson’s disease. By placing electrodes on the body, the underarm muscles can be stimulated using a weak current which then simulates Parkinson tremors. The intensity is adjustable. The simulation can be performed on both underarms at the same time.

**Included in the delivery:**
1 control device, 2011 bag, electrodes, cables and batteries.

**Price and conditions:**
€ 195

**Ear pieces with white noise tinnitus**

The ear pieces electronically simulate bilateral tinnitus with white noise. Its volume can be adjusted or switched off. When the tinnitus feature is switched off, the ear pieces simulate high-frequency hearing impairment.

**Included in the delivery:**
1 set of ear pieces with integrated tinnitus noise, volume adjustment button, batteries and bag.

**Price and conditions:**
€ 345

**Headset with 8 different tinnitus sounds**

The device simulates eight different types of tinnitus: Any of the different types of tinnitus can be chosen and the volume adjusted. A linear simulation of hearing loss can be simulated via the white noise type.

**Included in the delivery:**
1 set of ear pieces with eight tinnitus sounds, volume adjustment button, batteries and bag.

**Price and conditions:**
€ 210
Accessories II

This set of accessories simulates illnesses, impairments and other conditions that occur throughout the ageing process. The components are available as a supplement for the SD&C age simulation suit.

**Cervical brace**

The cervical brace limits the movability of the head. The brace is hand washable, and normally is used without tricot. On request, there are different sizes available.

The cervical brace can be used with an additional tricot. The 4m long piece allows for 8 bandages.

**Included in the delivery:**
1 cervical bandage
Optional: tricot, 4m

**Price and conditions:**
€ 55
Tricot: € 20

"Cataract" simulation goggle

The cataract is simulated using a special film that is built into the goggles and that makes everything look cloudy. The simulation glasses also simulate a limited peripheral vision and a color change into the red. These classic goggles are included with the Senior Suit ® Alpha.

**Included in the delivery:**
1 simulation goggle with simulation film and storage bag

**Price and conditions:**
€ 145

5-factor, 2-level age simulation optics

The special optics with a fold-up visor simulate a vision loss of 40 years throughout 2 levels each of 20 years. The simulation includes a light macula degeneration (AMD), brightness loss, tunnel vision (retinal pigmentosa) and a color vision change. The optics are already included with the SD&C Senior Suit Beta and Delta.

**Included in the delivery:**
1 pair of simulation glasses with bag

**Price and conditions:**
€ 495
Accessories III

A pair of simulation gloves size 10 is included with each SD&C Senior Suit, with the SD&C Senior Suit Delta also one of size 9. The goggles depicted here allow the sensitization towards more traffic safety aside from the simulation of ageing.

2 Pairs of simulation gloves

The white cotton gloves simulate the reduced tactile behavior when the aged finger tips have less sensitivity. The gloves have a button on the inside and are machine washable.

Included in the delivery:

1 pair size 9
1 pair size 10

Price and conditions:

€ 40
Other sizes are available on request.

Drunkenness simulation goggles

The drunkenness simulation goggles simulate the vision when having a strong alcohol level. In comparison to the ageing optics, the view is not unsharp but rather blurred. The results are difficulties in balance and in the estimation of distances.

Included in the delivery:

1 simulation goggles with bag

Price and conditions:

On request

Drug consume simulation goggles

The drug consume simulation goggles simulate vision like after the consume of LSD or Ecstasy. The view appears caladoscopic colourful and blurred. The results are difficulties in the estimation of distances and with the coordination of reach and grip.

Included in the delivery:

1 simulation goggles with bag

Price and conditions:

On request
Accessories IV

These accessories help to simulate movability limitations.

**Elbow brace**

A nerve dysfunction or the need to fixate an elbow due to an acquired epicondylitis may result in total immobility of the elbow joint, severely reducing movability. To simulate this case, this elbow brace can be used. The bandage can be easily wrapped around the arm.

**Included in the delivery:**

1 elbow bandage

**Price and conditions:**

150 €

**Knee brace**

An accident may require knee immobility, and for the simulation of the resulting movement limitations this brace can be used, working with metal elements on both sides. A mechanical hinge allows the setting of angles between 0° and 90°.

**Included in the delivery:**

1 knee bandage

**Price and conditions:**

250 €

**Hemiparesis simulation set**

Knee and elbow braces together allow the simulation of hemiparesis, i.e. half side paralysis as after a stroke. The picture shows the opened elbow stiffening bandage and below the knee stiffening bandage with opened mechanical hinge.

**Included in the delivery:**

1 elbow bandage
1 knee bandage

**Price and conditions:**

€ 390

Guarantee and risk-free test purchase

SD&C guarantees impeccable quality. The unused simulation suit with unbroken seals may be returned if you are not completely happy with it at delivery, no reasons necessary. We guarantee one year for all electronic devices and textile parts (except batteries, electrodes, and gloves) and will replace broken components including free replacement delivery worldwide. For the long life of our Senior Suits, a repair and spare parts service is available thereafter. If you want to try out the suit, SD&C will be happy to organise a test purchase, which means that a purchase can be changed to a rental or a rental can be changed to a purchase.
About SD&C and the History of Age Simulation

The first simulations on ageing took place around 1970 as "instant aging" and consisted of rubbing Vaseline on a pair of glasses, applying weights to the feet and rubber bands between the foot joints. This is how young medical students formed a good picture of the possible suffering experienced by their geriatric patients.

Then a new idea came along. The founder of SD&C, Dr. Roland Schoeffel, worked for Siemens between 1992 and 2002 and his job was to research, by means of usability testing, the psychomotor performance limits of the elderly in order to develop user interfaces that could be operated just as easily by young and old alike. A suit to help researchers reproduce functional deterioration as one grows older and that could save on expensive tests would have been useful in this kind of work. In 1999, he therefore expanded on the idea of simply simulating geriatric illnesses into precisely simulating the ageing process from an ergonomics perspective. As a result, he sponsored a bio-mechanic dissertation in which the components of a first age simulation suit were scientifically validated.

Dr. Schoeffel has published papers and given many lectures worldwide on his experience and findings related to product design for the elderly. He has filed several patents on the topic and he has written guidelines on product design for the elderly. Between 2000 and 2005, his guidelines were used as the basis for an ISO standard, which is nowadays the uniform standard worldwide for easy to operate devices for the elderly. The demand for "ease of operation" for seniors has now expanded to "freedom from barriers" for blind people and people in wheelchairs. SD&C further developed the guidelines in the standard and created checklists with over 200 points which are now used as the basis for SD&C "Suitable for Senior" certification.

In 2003, SD&C began to present age simulation suits to the public and at companies to sensitise people to the special problems of the elderly and to help companies design products suitable for the elderly to use. The experiences gained from the suit demonstrations were applied to enhancing the suits over the years. Currently, SD&C is involved in getting legislators to adapt laws and regulations for true age-based equality, because there are major deficits in this area.
General Terms and Conditions

1. Prices
Unless otherwise indicated, all prices stated are the net price per unit not including VAT. VAT will not be charged on deliveries within Europe, if a EUID can be presented. Worldwide customers are responsible for their country’s import customs expenses and all local taxes. Should prices differ in currencies, Euro is the correct one.

2. Delivery
Sale deliveries within Germany are free of charge. When shipping to other countries, shipping costs are charged.

3. Transport route
SD&C insures deliveries along the transport route. If goods arrive damaged, they can be sent back. However, SD&C is not liable for damages as a result of a late shipment.

4. Changes
SD&C reserves the right to make product changes without prior notice. Should SD&C be unable to deliver certain individual components, we reserve the right to deliver a spare part item of the same value or we may turn down the order.

5. Use of the goods and liability
The goods are intended for commercial and institutional customers. When placing an order, the customer thus confirms that the goods will be used for commercial or institutional use. The user is responsible for using the goods properly. Commercial rental and loaning of the goods are prohibited. SD&C does not assume responsibility for any damage caused by the use of the suit.

6. Payment conditions / retention of title
SD&C requests complete or partial payment prior to delivery. All goods remain the property of SD&C until completely paid. Invoices are immediately payable without deduction. In case of deviating agreements, the payment agreement printed on the invoice is valid. If there is a delay in payment, we will charge a late fee of 4% above the currently valid bank rate from the Deutsche Bundesbank.

7. Testing, return and right to exchange
An age suit that is still sealed and was not used can be returned and payments will be refunded after the age suits return. A suit with a similar design can be rented for a test run. The costs of the rental are then credited on the purchase price. Except from return are multiple orders and specialized suits along with all components that have been especially altered or procured for a customer. Returns are only accepted in sufficient condition for resale.

8. Cancelation
If a rental is cancelled two weeks before the agreed date or if an accompanied event is cancelled shorter than 6 weeks before the agreed date, a cancellation fee of 25% will be charged.

9. Court of jurisdiction
Court of jurisdiction is Freising in Bavaria, Germany

10. Effectiveness
The terms and conditions (T&Cs) of business shall become effective once an order is placed. Should one or more conditions be invalid, this shall not affect the overall validity. We cannot accept deviating conditions from the customer, even if we do not expressly object to them. Incidentally, the regulations from the Commercial Code and the Civil Code shall apply in their respective versions for all terms and conditions of business not covered in the T&Cs. If in doubt of the translation, the German language version is valid.
